In summer 2011, Rostislav Vaněk encouraged me to participate on his new typeface project. He decided to create both -sans and -serif families at the same time for the benefit of designers and studios looking for perfectly matching fonts. My task was to digitize his drawings only, but as the work developed, I felt it could be useful to extend the design up to lightest possible extremes to get more colorful interpolated family. *In March 2012 we can offer the result of Rostislav's clever idea as font package with all advanced functions such as smallcaps, oldstyle figures, ligatures &tc. Clara has distinctive open character with higher x-height assuming its flawless usage in magazines, books, catalogues and orientation systems.*

V létě 2011 mě Rostislav Vaněk vyzval abych se zúčastnil jeho nového písmového projektu. Rozhodl se vytvořit zároveň bezserifové a serifové rodiny ku prospěchu grafiků a studií jež shánějí perfektně sladěné fonty. Mým úkolem bylo prostě zdigitalisovat jeho kresby, ale jak se práce vyvíjela, cítil jsem, že by bylo užitečné rozšířit tuto rodinu o nejsvětější krajnosti abychom obdrželi barevnější interpolovanou rodinu. *V březnu 2012 můžeme nabídnout výsledek Rostovy moudré myšlenky jako balík fontů se všemi pokročilými funkcemi jako jsou malé kapitálky, skákavé číslice, ligatury atd. Clara má osobitý otevřený charakter s větší střední výškou minusek, jež předpokládá dokonalé použití v časopisech, knihách, katalozích a orientačních systémech.*
